6 October 2005: Economic and Policy Watch: Korea – KRW vulnerable to Kospi, Fed risk

Tim Condon

The Korean won is vulnerable to continued net foreign selling of Korean equities and an upward revision of the likely path of the fed funds rate. We recommend investors position for further depreciation of the won against the dollar.

Economic and Strategy

Economic update

Korea

Economic and Policy Watch

KRW vulnerable to Kospi, Fed risk

4 October 2005

The Korean won is vulnerable to continued net foreign selling of Korean equities and an upward revision of the likely path of the fed funds rate. We recommend investors position for further depreciation of the won against the dollar.

The strong performance of Korea's stock market this year makes the Korean won one of the most undervalued Asian currencies to expect returns in market forecasts of Late Fall tightening, in our view. The benchmark Kospi index ranks in the top performing Asian equity market this year, up 27% year-to-date and 62% year-over-year. Foreigners have been an important part of the story, buying in net \$1.3 billion of Korean equities since 2004. Their buying continues closely with changes in the Kospi (Figure 1).

Figure 1: Foreign equity inflows into the Kospi index

Source: Bloomberg

Foreigners turned into steady net sellers of Korean equities in mid-September but the inflow continued to the month before, a pattern rarely observed (Figure 1). We consider it more likely that the South join the Hong Kong and add sales rather than the Hong Kong sign the trade as net buyers.

14 October 2005: Economic and Policy Watch: Singapore – Pay 3-year SGD IRS

Tim Condon

Differences in state of the business cycle in the US and Singapore point to greater upside in Singapore interest rates, despite the more hawkish Fed stance.

Economic and Strategy

Economic update

Singapore

Economic and Policy Watch

Pay 3-year SGD IRS

14 October 2005

Differences in state of the business cycle in the US and Singapore point to greater upside in Singapore interest rates, despite the more hawkish Fed stance.

The ongoing assessment of the likely path of the Fed funds target rate points to upward pressure on US interest rates and bond yields. Singapore's exchange rate management points to that pressure being transmitted to Singapore's interest rates. But the historically wide negative differential between Singapore and US three year rates is greater upside for rates in Singapore to rise than for their counterparts in the US (Figure 1).

Figure 1: Singapore-US zero rate differential (3y)

Source: Bloomberg

Differences in the state of the business cycle between the US and Singapore are one reason for the wide differential depicted in Figure 1. The US Fed is in the middle stage of its tightening cycle. It appears determined to raise rates beyond neutral to prevent inflationary pressure. The prospect of tightening monetary policy opens the upside in US yields.

Japan

AIFUL Corporation

Buy

Best exposure to breakout in Japanese consumer credit cycle

25 October 2005

We initiate coverage on AIFUL 4.45% 10s and AIFUL 5.0% 10s with BUY recommendations. The yield on both is 5.2% but we forecast the total return on the 5.0% notes at 5.7% versus 5.6% for the 4.45% notes.

Largest Japanese consumer finance company. The issuer has the largest market share in the non-bank consumer finance sector.

Consistent performer. The Group has demonstrated skill at risk management and underwriting in a high-risk lending sector. Consistently high net interest margins (120%), good cost discipline and low default rates are the source of its record of strong operating performance.

Strong funding structure. Funding comes from stable, long-term diversified sources. The average funding rate steadily declined to 1.00% in mid-March 2005.

Aggressive expansion strategy. Credit costs have risen with acquisitions but the Group manages high-risk exposures well via vigorous provisioning and write-offs.

Well positioned in credit cycle. Although Japan's banks are much improved, ING believes consumer finance companies (CFCs) are well positioned to exploit rising consumer credit demand. Retail customers being targeted by banks, get what they want from CFCs: 1) unsecured credit, 2) rapid response, 3) convenience and 4) consistency.

The long wait for Vietnam ends

The much hinted at Vietnam sovereign bond issue is about to become a reality. The government announced in October that it would offer \$750 million of bonds in its first overseas debt sale. The government reportedly will use the proceeds for state projects. The issue will also set a benchmark for other issues, with the Vietnam Oil and Gas Corp., shipbuilder Vinashin and state-owned Electricity of Vietnam all potential issuer candidates.

The sovereign is rated Ba3/BB-/BB- by Moody's, S&P and Fitch and we expect the prospect of greater choice among high-yield Asian sovereigns will favourably predispose investors toward the new issue. ING concurs with the rating agencies that Vietnam is stable 'BB-' risk (Figure 3).

Strong GDP growth represents Vietnam's greatest hope for reducing sovereign risk. Growth punched above 7% in 2002 and has remained there since, with ING forecasting growth of 8.3% for 2005. The IMF forecasts growth to be sustained at 7% into the medium term.

We consider the IMF's forecast reasonable. For one thing growth is coming off a low base. Per capita income is under \$600 (Figure 3). Vietnam also has embraced the investment-driven growth model that has proved successful in the other high-performing Southeast Asian economies. This model's main virtue is its ability to generate jobs in the industry sector for workforces that are expanding due to natural increase and rural-urban migration. Investment-driven growth requires a high saving rate, which requires macroeconomic stability. The flanking policies that support this end are fiscal policy that avoids excessive public dissaving and monetary policy that keeps inflation low. The authorities have managed to keep inflation in single digits since a bout of overheating in the mid-1990s (Figure 4). Over the last decade fixed investment has risen by 10% of GDP to 34%.

A poor country like Vietnam that invests 34% of GDP and converts investment into GDP efficiently can grow for many years at a 7-8%. In a non-market economy like Vietnam challenge is maintaining investment efficiency. For Vietnam, as in China, this depends on pro-market economic reforms.

Source: CEIC, ING

Attention is focused on two events, accession to the World Trade Organization, which has slipped from the target date of end-2005 and is now expected by mid-2006, and equitization of the state-owned Bank for Foreign Trade (Vietcombank). As observed in China, WTO accession would help sustain exports and FDI and catalyze other economic reforms. And as in China, reform of the state-owned banks to put their operations on a more commercial basis is a key pro-market reform.

Strong, investment-driven growth has generally meant that investment has exceeded national saving and Vietnam has run a current account deficit in every year but three since 1994. The deficit peaked in 2003 at 4.7% of GDP and we estimate a narrowing to 3.5% in 2005. But we also forecast deficits persisting into the medium-term (Figure 5).

The existence of current account deficits highlights the two main sources of financing the deficit, Official Development Assistance and FDI. The two have more than fully financed the current account deficit. As a result the overall balance of payments has strengthened steadily as seen in a growing stock of foreign exchange reserves and a liquidity ratio (foreign exchange reserves in relation to debt service plus short-term debt) that is among the highest in its peer group (see again Figure 3).

The two main sources of current account financing are closely related. Vietnam is one of the largest clients of both the World Bank and the Asian Development Bank. The World Bank's assistance program focuses on supporting high growth through the transition to a market economy, sustainable development and improved public administration and legal systems. The overarching objective of the Asian Development Bank's program is poverty alleviation. In view of Vietnam's low income level the development banks are committed for the long haul. Their support for the government's reform program supports the forecasts of sustained strong inflows of confidence-sensitive FDI.

Vietnam is a transition economy where political stability could be an issue. The Communist Party of Vietnam controls the electoral process and the executive. Prospects for the emergence of greater pluralism in the medium term are very slim. The Tenth Party Congress takes place in 2Q06 but agreement has already been reached on the need to persevere with economic reforms, including an ongoing anti-corruption drive. As a bottom line on the political scene, it is stable and supportive of

the continued steady improvement in the economic fundamentals through pro-market economic reforms.

We expect demand for the new bond to be very strong. The 10-year deal was upsized by 50% to \$750 million. We expect one source of appeal, particularly to Asian focused investors, will be that it's a high-yield Asian sovereign that's not the Philippines or Indonesia.

Indicative pricing puts the yield at 7.25% or 280bp over the 10-year Treasury bond yield. At that spread Vietnam is pricing very close to the 'BB-' rating benchmark and about 20bp inside 10-year Indonesia risk. Based on our view that the sovereign is stable 'BB-' risk we believe a spread of T+280 would be very close to fair value (Figure 6).

Looking at Asian dollar bonds more generally, we retain the cautious stance we adopted in the September *Monitor*. Where this has produced the most underperformance against the benchmark is the Philippines (we have a Hold recommendation on Indonesian sovereigns). Improvements in the economic fundamentals in the Philippines (see the Sovereign section below) lead us to upgrade Philippine sovereigns to Hold from Sell. But we still consider the high-yield sovereigns the most vulnerable to a disorderly flight from risk that Fed tightening could trigger. We expect the high-yielders will offer great value once it's clearer that the Fed is near the end of the tightening cycle, which is when we expect to revisit our spread targets and recommendations for the Indonesian and Philippine sovereigns.

There are two changes to our top picks (Figure 7). We replace illiquid quasi-sovereign Industrial Bank of Korea 14s(09c) with the new sovereign Korea 25s. At an i.spread of T+105 against our T+85 target the forecast total return is 7.3%.

We also replaced Mandiri 08s with the Resona 5.85 perpetuals (16c). We expect spread compression on the former to be slowed by the recent government decision to delay divestment, the criminal trial of former executives and the need to refinance up to \$400 million of maturing debt next month. Resona joined MTFG, UFJ Bank and Mizuho in revising profit higher on higher operating profits at subsidiaries, gains on share sales, and lower credit charges. The scale of the revision supports our view that the credit turnaround is on track, and that growth in retained earnings reduces payment risk on its perpetual securities.

China (A2/A-) – S&P upgrade likely to follow Fitch’s

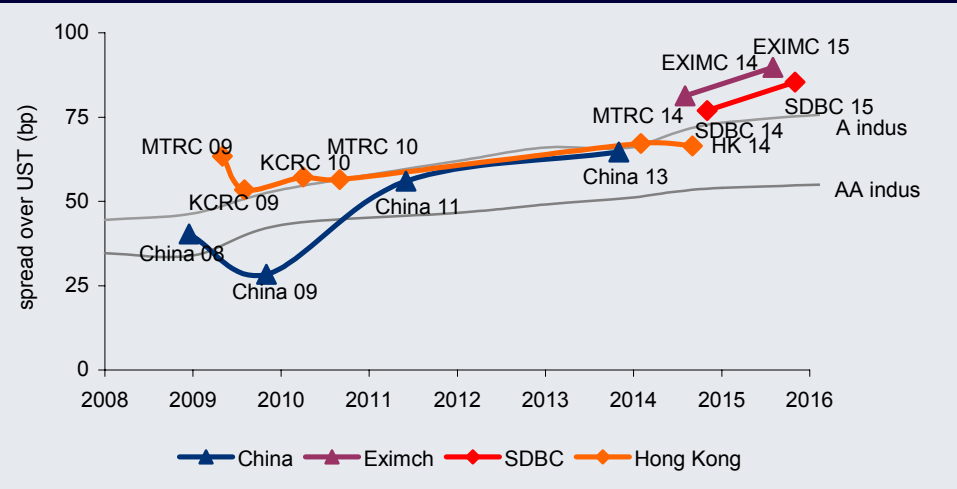

There were no significant moves in China spreads last month. We view China’s sovereign dollar bonds as either fairly valued or expensive and we maintain Sells on China 08s and 09s and Holds on 11s and 13s. We have Buys on quasi-sovereign Eximc 14s and 15, which we see as a carry trade offering a bit of spread pick-up for equivalent risk. We also advise investors seeking China exposure to consider the higher, less risky returns available via Hong Kong (A1/AA-) quasi-sovereigns (Figure 16).

Fitch upgraded China’s long-term foreign currency rating to ‘A’ from ‘A-’ with Stable outlook. The move aligns Fitch with Moody’s A2. Both are one notch above S&P, which we expect to upgrade to ‘A’ within six months.

Also noteworthy was another upside GDP growth surprise. It came in at 9.4% YoY in 3Q05, down slightly from 9.6% in 2Q but ahead of the 9.3% consensus forecast. Domestic demand was the source of the upside surprise as the contribution of net exports shrank (Figure 17). On the domestic demand front investment was the big contributor. There also was another downside surprise in September inflation. All in all, China’s economy has seldom looked this balanced and healthy in the past decade.

We expect volatility in CNY NDFs ahead of the release of the US Treasury’s report on exchange rate practices in November. We do not expect the US to name China as a currency manipulator because we expect China will come up with a compromise to resolve the ongoing textile trade dispute. However, recalling what happened last time, we would interpret a delay in issuing the Treasury report as signalling another yuan exchange rate reform.

Indonesia (B2/B+) – Outperformer in emerging market selloff

Sovereign dollar bonds outperformed in the emerging market selloff as the market rewarded the Yudhoyono government's tough decision to sharply cut fuel subsidies. The spread on the Indonesia 14s and 15s widened by 12-14bp compared with the 20bp widening in the EMBI+.

We maintain our hold recommendation on the Indonesia curve, which was extended this month with the issue of \$1.5 billion of 10- and 30-year bonds. Spreads on newly issued Indonesia 16s and 35s came in slightly, which we attribute to their attractive pricing. The 10-year tranche was priced to yield 7.625%, and 30-year to yield 8.625%, both at the low end of their indicative ranges. The new Indonesia 16s bonds offer a 20bp spread pick-up over existing Indonesia 15s, which we consider attractive (Figure 19).

The October 1 cut in fuel subsidies surprised everyone with its size, producing an average 127% increase in fuel prices. It comes on top of a 29% rise in March. The positive effect of the cut in fuel subsidies will be seen mainly in the government budget. Subsidy outlays ballooned this year to an expected 139 trillion rupiah (roughly \$13.9 billion) from an initial budget figure of 40 trillion rupiah. The 2006 revised draft budget shows outlays for fuel subsidies at 54.3 trillion rupiah plus an additional 23.6 trillion rupiah for non-petroleum subsidies. Thus, year-on-year outlays on subsidies are declining by 60 trillion rupiah (2.4% of GDP) or \$6 billion. Indonesia's 2006 budget is likely to be an embarrassment of riches, particularly if it leads the Parliament to ask why fuel prices had to be raised so drastically in 2005. We see fiscal consolidation remaining an important performance driver for the sovereign dollar bonds.

This highlights the downside of the energy price hike. The release of the October CPI on 1 November is likely to show a significant jump in inflation to 14-15% from 9.1% in September. Central bank officials have said that they will have to raise interest rates and we see their reference rate going up 100bp to 12%. While we also expect fiscal consolidation to be a performance driver for rupiah-denominated government bonds, we advise investors to hold off until the October inflation data is released and Bank Indonesia hikes interest rates.

Korea (A3/A) – Is Fitch too far ahead of the curve?

Fitch raised the Republic of Korea’s long-term foreign currency rating to ‘A+’ from ‘A’ and its local currency rating to ‘AA’ from ‘AA-’. It raised the foreign currency country ceiling to ‘AA-’. The outlooks on all ratings were revised to Stable from Positive. Fitch is ahead of the curve in upgrading Korea, which is not where rating agencies usually like to be. We view Korea as ‘A’ risk. The next rating action we anticipate is for Moody’s to align its ‘A3’ rating with S&P’s ‘A’ rating.

Fitch cited the reduced security risk with North Korea’s willingness to abandon its nuclear program in return for economic and energy assistance. It also said South Korea’s strong fiscal and external payments positions supported the upgrade. Fitch forecasts the government budget posting a sixth consecutive surplus this year of 2.3% of GDP and the government debt/GDP ratio reaching 35% of GDP, less than the median for like-rated sovereigns. On the external front, Fitch forecasts exports reaching 40% of GDP, supporting large trade and current account surpluses and a large stock of foreign exchange reserves.

We agree that North Korea’s recent actions have reduced political risk. But with lower political risk has come higher economic, especially fiscal, risk. The uncertain cost of reducing the economic backwardness of the North will, we believe, overhang the country’s creditworthiness and sovereign dollar bond prices as highlighted by this year’s heavy dollar bond issuance by the quasi-sovereigns and the impending pricing of a euro- and dollar-denominated sovereign bond.

The Republic priced its two-tranche \$1 billion bonds on 26 October. The \$600 million equivalent 10-year euro-denominated tranche was price to yield 25bp over mid-swaps, the tight end of the 25-27bp indicative range. We consider this as fair value for an ‘A’ risk and assign Hold recommendation to this credit. The \$400 million 20-year dollar-denominated tranche was priced to yield T30+95bp, tighter than T+97-100bp indication. We recommend Buy on the dollar bond tranche as the i.spread pick-up of 30bp over Korea 14s is generous for solid ‘A’ risk. Switching into the new Korea 25s from the admittedly illiquid Petronas 22s (A3/A-) looks very attractive. Investors get lower credit risk, a spread pick-up and a cash take-out (Figure 21).

Malaysia (A3/A-) – Vulnerable to hot money outflows

Sovereign and quasi-sovereign spreads tightened between 4-14bp in October with long-dated Petrol 22s and 26s outperforming. At T+98bp for the Petrol 22s and +108bp for the Petrol 26s their i-spreads have gone through our +110bp and +115bp targets and we change our recommendation to Hold from Buy. We maintain our Hold recommendations on Malay 09s and 11s and on Petrol 12s and 15s. The switch we recommended last month out of Petrol 12s into KDB 12s still looks attractive, though the yield pick-up has diminished (Figure 23).

PT Penerbangan Malaysia, the government-owned majority owner of Malaysia Airlines, pulled its \$1 billion bond offer citing documentation issues. The government was fully guaranteeing the issue. This is the second time a prospective Penerbangan issue has been scrapped. In 2003 poor market conditions were cited and the company resorted to the loan market.

From a short-term perspective we consider Malaysian sovereign and quasi-sovereign dollar bonds vulnerable to a spike in USD/MYR and local bond yields from a reversal of hot money inflows. Bank Negara Malaysia’s interest rate policy seems targeted at driving out the hot money that surged into Malaysia beginning last September to position for a yuan revaluation. The central bank is beginning to succeed as seen in the \$900 million drop in foreign exchange reserves in the first half of October. Investors need to be careful that the trickle doesn’t turn into a flood that shocks financial asset prices. We see 4Q05 as the period of greatest vulnerability as investors may look to cut stale long ringgit positions ahead of the New Year.

Philippines (B1/BB-) – Asset class worries replace Philippine-specific jitters as main overhang on ROPs

ROP spreads widened by 2-14bp from the intermediate to long end of the curve. Investors bought ahead of the expected Supreme Court (SC) decision reaffirming its earlier ruling that the EVAT law was constitutional. Investors were not disappointed. Very high growth of overseas Filipino worker (OFW) allayed fears about US dollar liquidity. 8M05 OFW remittances of \$7 billion represented a 28% YoY increase. The central bank raised its OFW remittance forecast for 2005 by 20% to \$10 billion and forecasts another 10% increase in 2006 to \$11.3 billion. Such inflows would likely more than cover the \$5-6 billion trade deficit and a good proportion of the \$8 billion external debt service.

Fiscal developments continue to surprise on the upside. Collections from the hike in sin taxes (excises on alcohol and tobacco products) approved late last year have improved since 1H05 and now are within striking distance of the targets. 8M05 cigarette excise tax collections were 15.4 billion pesos, a 7.1% YoY increase and just 690 million pesos below target. Alcohol excise taxes came to 11.2 billion pesos, up 11.5% and only 150 million below target. The performance augurs well for EVAT collections in 2006. November marks the expected implementation of the EVAT. The Finance Minister has said, and we believe him, that the government intends to implement the EVAT in its entirety from the beginning of 2006.

Politics, as usual, could undermine what otherwise would be an improving credit story. The November implementation of the EVAT is a near-term potential flash point. A protracted flash could encourage military interventionism and usher in the kind of turmoil witnessed in early July. We consider the likelihood of this low, which leaves as the most likely path for credit spreads a continued narrowing on positive fiscal developments. History teaches that generalized emerging market weakness would not spare ROP spreads. But we regard it as progress that the main threat to spreads has shifted from Philippine-specific jitters to more general asset class concerns. For this reason we have changed our recommendation on ROP dollar bonds from Sell to Hold.

Banks – Japanese turnaround on track

ING recommendations (%)

	BUY	HOLD	SELL
Banks	65	33	2

Source: ING estimates

More positive news out of Japan exerts a tightening bias on credit spreads of Japanese lenders. Resona joins MTFG, UFJ Bank and Mizuho in revising 1H profit higher, citing better operating profits across most subsidiaries, gains on share sales, and lower credit charges. After more than a decade of contraction, a breakout in Japanese consumer credit growth is confirmed with June 2005 data pointing to a 7.3% YoY rise (Figure 25). The declining trend in personal bankruptcy cases is also gathering momentum (Figure 26).

The scale of earnings revisions and trends in consumer credit support our call that the Japanese credit turnaround is on track. Record operating profits enhance debt service capability and accelerate public funds redemptions, which will, we expect, drive credit spreads tighter. Organic growth in distributable earnings will also reduce payment risk on hybrid securities in our view. The **MIZUHO 8³/₈ (09c)** and **MTFG 8³/₄ (08c)** will be principal beneficiaries of this trend, where we expect spread compression to T+105bp and T+90bp respectively.

This month we expand coverage on Japanese lenders with BUY recommendations on AIFUL Corporation's two USD senior notes. Enhanced debt service capacity at Japan's largest consumer finance company from high net interest margins (+20%), strict expense and write-off discipline, and low defaults should drive 15bp of spread contraction to our targets of T+75 bp for both **AIFUL 4.45% 10s** and **AIFUL 5% 10s**.

We believe consumer finance companies are well positioned to exploit the consumer credit cycle upturn because they deliver what banks typically do not, which is small unsecured loans with rapid credit decisions. We tighten our spread target on TAKFUJ 9.2% 11s to T+90bp (from +110bp) on improved operating prospects.

Malaysian merger mania

Bank Negara Malaysia's approval of CIMB Berhad's bid on 21 October to formally negotiate the acquisition of Southern Bank drove spreads tighter on **SBKMK 14(09c)**. The news points first to a change in the authorities' past preference for government-orchestrated consolidation in favour of a market-driven approach, which increases speculation over prospects for more M&A deals.

Malaysia remains over-banked, and as we argued in our October 2004 report, Southern Bank's niche status makes it vulnerable to acquisition. High unrealised legacy credit costs weigh on asset quality. NPLs, while since improved, are still over 10% of loans. Reliance on purchased funds remains higher than at peers, and below-peer liquidity ratios imply tighter liquidity and growth constraints. One year later, not much has changed.

CIMB's potential takeover of Southern Bank would be bond friendly. It is not obvious however that a hostile bid by CIMB will be successful; either way, it places the smaller, more vulnerable banks on notice. We anticipate speculative demand, which has tightened the spread on the **SBKMK 14s(09c)** to T+125bp, to spill over to other bank bonds. We maintain our BUY and spread target at T+120bp for the Southern Bank bond, and reiterate our BUY on **EONBK 14(09c)** with a spread target of T+125bp.

Change in recommendations

Credit spreads on CMBKKO 08s, BMRIIJ 12(07c), NEGARA 07s and SUMIBK 12s have reached our targets, and we change our recommendations to HOLD, from BUY.

Corporates – TITAN 12 preferred

ING Recommendations (%)

	BUY	HOLD	SELL
Corporates	14	71	14

Source: ING

Modest movements in spreads for Asian corporate USD bonds

The interpolated spreads over USTs for the majority of the corporate bonds within our research universe did not change materially during the last month. Many credit spreads remain at the lower end of our fair value estimates. Our recommendations for the Asian corporate USD bonds remain predominately either HOLD or SELL, apart from on GENTMK 14, SINOFO 11, and TITAN 12.

BUY recommendation maintained for TITAN 12

TITAN 12 remains the only corporate credit among our top recommendations for Asian USD bonds. The notes are one of the highest yielding credits in Asia and appear attractive vis-à-vis similar rated Asian and Chinese/Hong Kong issues (see Figure 31). While risks are inherent within the global oil transportation industry, manageable debt obligations, a steady medium-term industry outlook, and a forecast 1Y total return of 12.6% adequately compensates in our view.

While leverage at Titan has risen by more than three times since the issuance of TITAN 12, we regard the company's ability to meet debt obligations as robust even in our worst-case scenario; (where we have lowered VLCC rates by up to 48% of existing rates [see Figure 32]). We expect VLCC rates to be within a range of USD 38,000-56,000/day over the coming fiscal years.

Telecoms – Minimal spread movements

ING Recommendations (%)

	BUY	HOLD	SELL
Telecoms	9	41	50

Source: ING

USD 400m of debt reduction planned by PLDT in 2006

PLDT detailed plan to continue its debt reduction programme by another USD 400m in 2006 (following USD 600m this year). The telecom operator's total debt was USD 1.9bn at end-August 2005. In addition, PLDT stated its PHP 29bn profit forecast for 2005 should be achieved despite a widely expected static cellular subscriber base in 3Q05; (non-revenue generating customers are being flushed from its subscriber base). While we have revised our spread targets tighter for the TELPM curve (to reflect the new targets for the sovereign), our SELL recommendations are maintained.

Telekom Malaysia (TM) to officially become majority shareholder in XL

TM announced the exercise of an option to acquire a further 32% equity stake in XL for USD 460m. The Malaysian telecom operator will raise its shareholding to 57% from 25% within the third-largest Indonesian wireless operator. The move of XL to a subsidiary of TM was widely anticipated since 1H05.

Share buy back programme at Telkom Indonesia (Telkom) planned

Telkom announced plans to buy back IDR 5trn (approximately USD 500m) worth of shares from the public. This will increase the government's stake in the telecom operator (currently 51%). Telkom is generating substantial free cash flow, which supports a buy back programme. Our credit view of the telecom operator is unchanged given its robust free cash flow projected over the coming fiscal periods.

Preferred Asian telecom USD bonds is unchanged

We continue to recommend a BUY for CITYYTE 15(10c). While the competitive environment for wireline and broadband Internet services in Hong Kong remains fierce, an YTM/W of 10.1% compensates for risk at the second-largest fixed-line operator in the territory. Furthermore the interpolated spread for CITYYTE 15(10c) is the widest for any Asian telecom or China/Hong Kong issuer under our coverage.

Utilities – Modest value on offer

ING Recommendations (%)

	BUY	HOLD	SELL
Utilities	5	10	86

Source: ING

ROADKG 11 remains sold BUY recommendation within sector

Our investment view towards the Asian utility USD bonds remains unchanged from last month's *ADBM*. We regard relative value as scarce for the Asian utility notes, with ROADKG 11 as our sole BUY recommendation within the sector. The rating action overhang is removed from both Moody's and Standard and Poor's, with both agencies maintaining low investment-grade status on the toll operator's bonds.

However, valuations for the other Asian utility USD bonds within our research universe just adequately compensate for risk in our judgement. Many are trading at or near their respective benchmarks, specifically the investment-grade notes (see Figures 41 and 42). We regard further spread compression as mainly a function of trading liquidity absent an improving credit profile. We project Asian utility USD bonds to underperform other sectors within the region.

SELL recommendations maintained on Chinese gas companies' bonds

The sharp compression of interpolated spreads for PANVA 11 and XINAOG 12 through our spread target since September remains unchanged. The two notes trade with the narrowest interpolated spreads over USTs within our speculative-grade research universe of Chinese/Hong Kong issuers (see Figure 40). While we view the credit fundamentals for both Chinese gas companies as positive, current valuations are rich in our view and do not adequately reflect credit risks.

Fig 39 Asian high-yield USD utility bonds: relative credit spreads

Source: Bloomberg, Bridge, ING

Fig 40 China/HK high-yield USD bonds: relative credit spreads

Recommendations

ROADKG 11

China	ING rating	ING Credit outlook	Moody's	S&P	Coupon (%)	Maturity	Curr bid spread	Est spread Oct-06	Est 1Y total return	Dur	Rec
ROADKG	BBB-	Stable	Baa3	BBB-	8.250	15-Jul-11	211	160	8.4%	4.8	BUY

Source: Bloomberg, ING estimates

Wide credit spread for BBB- risk with a forecast 8.4% 1Y return fairly values notes for industry and financial risk in our view. Rating action overhang removed at both Moody's and Standard and Poor's.

PANVA 11

China	ING rating	ING Credit outlook	Moody's	S&P	Coupon (%)	Maturity	Curr bid spread	Est spread Oct-06	Est 1Y total return	Dur	Rec
PANVA	BB+	Stable	Ba1	BB+	8.250	23-Sep-11	307	325	6.6%	4.8	SELL

Source: Bloomberg, ING estimates

The interpolated spread is through our target, which we regard as fully valuing the high BB notes.

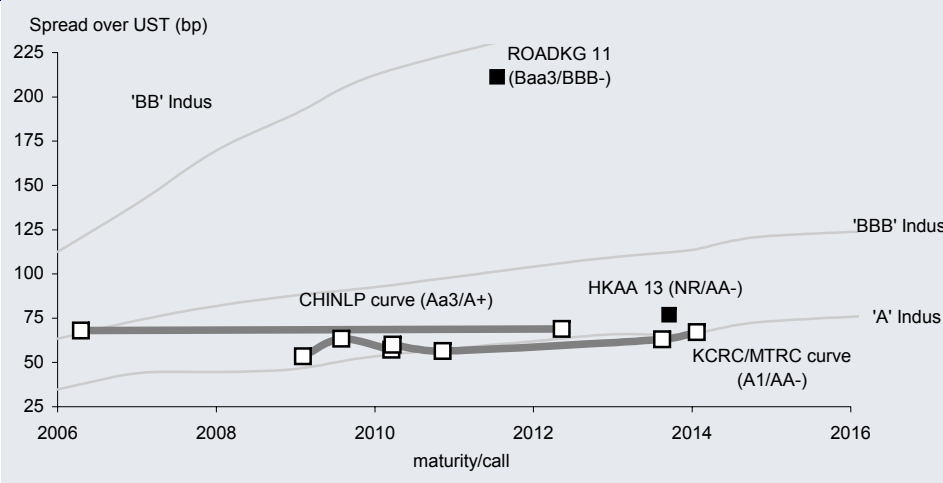

XINAOG 12

China	ING rating	ING credit outlook	Moody's	S&P	Coupon (%)	Maturity	Curr bid spread	Est spread Oct-06	Est 1Y total return	Dur	Rec
XINAOG	BB+	Stable	Ba1	BB+	7.375	5-Aug-12	274	325	4.7%	5.4	SELL

Source: Bloomberg, ING estimates

We view the notes as fully valued against other high-yield utility and similar-rated China/Hong Kong issues, with the tightest credit spread among the latter.

Disclosures Appendix

ANALYST CERTIFICATION

The analyst(s) who prepared this report hereby certifies that the views expressed in this report accurately reflect his/her personal views about the subject securities or issuers and no part of his/her compensation was, is, or will be directly or indirectly related to the inclusion of specific recommendations or views in this report.

IMPORTANT DISCLOSURES

Company disclosures plus recommendation definitions and breakdowns are available from the disclosures page on our website at <http://research.ing.com>

The *remuneration of research analysts* is not tied to specific investment banking transactions performed by ING Group although it is based in part on overall revenues, to which investment banking contribute.

Securities prices: Prices are taken as of the previous day's close on the home market unless otherwise stated.

Conflicts of interest policy. ING manages conflicts of interest arising as a result of the preparation and publication of research through its use of internal databases, notifications by the relevant employees and Chinese walls as monitored by ING Compliance. For further details see our research policies page at <http://research.ing.com>.

FOREIGN AFFILIATES DISCLOSURES

Each ING legal entity which produces research is either a subsidiary of ING Bank N.V. or a branch of ING Bank N.V. See back page for the addresses and primary securities regulator for Asian research offices.

Disclaimer

This publication has been prepared on behalf of ING (being for this purpose the wholesale and investment banking business of ING Bank NV and certain of its subsidiary companies) solely for the information of its clients. ING forms part of ING Group (being for this purpose ING Groep NV and its subsidiary and affiliated companies). It is not investment advice or an offer or solicitation for the purchase or sale of any financial instrument. While reasonable care has been taken to ensure that the information contained herein is not untrue or misleading at the time of publication, ING makes no representation that it is accurate or complete. The information contained herein is subject to change without notice. ING Group and any of its officers, employees, related and discretionary accounts may, to the extent not disclosed above and to the extent permitted by law, have long or short positions or may otherwise be interested in any transactions or investments (including derivatives) referred to in this publication. In addition, ING Group may provide banking, insurance or asset management services for, or solicit such business from, any company referred to in this publication. Neither ING nor any of its officers or employees accepts any liability for any direct or consequential loss arising from any use of this publication or its contents. Copyright and database rights protection exists in this publication and it may not be reproduced, distributed or published by any person for any purpose without the prior express consent of ING. All rights are reserved. Any investments referred to herein may involve significant risk, are not necessarily available in all jurisdictions, may be illiquid and may not be suitable for all investors. The value of, or income from, any investments referred to herein may fluctuate and/or be affected by changes in exchange rates. Past performance is not indicative of future results. Investors should make their own investment decisions without relying on this publication. Only investors with sufficient knowledge and experience in financial matters to evaluate the merits and risks should consider an investment in any issuer or market discussed herein and other persons should not take any action on the basis of this publication. This publication is issued: 1) in the United Kingdom only to persons described in Articles 19, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2001 and is not intended to be distributed, directly or indirectly, to any other class of persons (including private investors); 2) in Italy only to persons described in Article No. 31 of Consob Regulation No. 11522/98. Clients should contact analysts at, and execute transactions through, an ING entity in their home jurisdiction unless governing law permits otherwise. ING Bank N.V., London branch is authorised by the Dutch Central Bank and regulated by the Financial Services Authority for the conduct of UK business. It is incorporated in the Netherlands and its London branch is registered in the UK (number BR000341) at 60 London Wall, London EC2M 5TQ. ING Financial Markets LLC, which is a member of the NYSE, NASD and SIPC and part of ING, has accepted responsibility for the distribution of this report in the United States under applicable requirements.

This document has been written partly or entirely by analysts based outside the UK who are not governed by the ING Bank London Branch Research Policy (drawn up in accordance with FSA Rule COB 7.16.5R (2)) and therefore is not classified as UK Independent Research as defined in the Policy.
